Re: Plan for Remedial Activities at the Holmden Avenue Property
Cleveland, Ohio

Dear Mr. Harris:

It was a pleasure meeting you. As follow-up to our meeting on November 4, 1997, we would like to document the agreement that was reached with yourself and Ohio EPA representatives Bart Ray and Sheila Abraham, as to the remedial activities to be performed at the Holmden Avenue property in Cleveland, Ohio.

It was determined that all material greater than 400 parts per million total lead will be excavated from areas that are safely accessible. This includes areas down the southern slope. Areas that are not accessible to humans or equipment and/or have been covered with cement debris deposited by the City of Cleveland will not be excavated. Samples will be collected from these areas to document lead levels. The property at the immediate bottom of the slope includes a railway and is a heavily industrialized area being utilized as storage space for LTV Steel.

Also, preliminary XRF samples indicated that lead levels greater than 400 ppm does not exist in the areas that are unaccessible.

Please let us know immediately if our understanding of activities to be performed is not in accordance with yours. We can be contacted at (630) 616-2100.

Respectfully submitted,

Dean C. Pisani
